## Did you Know

**You may know..**

The line that separates day and night sides on Earth is called **terminator**.

If you cannot see the sun you are on the night side of the terminator otherwise you are in the day side.

The terminator moves at about 1000 miles per hour through the subsolar points.

In the Arctic Circle the terminator does not move at all; it is either night for six months or day for six months

Antarctica is home to the largest volcano range on earth, greater than east Africa and the Himalayas.

If the ice sheets in Antarctica are reduced significantly, this could release pressure on the volcanoes that lie below and lead to eruptions that could further destabilise the ice sheets and enhance sea level rises that are already affecting our oceans.

**You may know..**

Under the surface of Antarctica there are more than **138 dormant volcanoes** which can become active at any moment.

## ANSWERS

Eleven

Eleven. Because Lisa lost three games to Sasi, she had lost ₹3 (₹1 per game). So, she had to win back that ₹3 with three more games, then win another five games to win ₹5.

**You may know..**

NASA has a job position for defending our planet from aliens. The official job title is "Planetary Protection Officer" and it pays \$187,000 a year.

NASA named Dr. J. Nick Benardini as the agency's Planetary Protection Officer.

The officer will carefully control forward contamination of other worlds by terrestrial organisms and organic materials carried by spacecraft in order to guarantee the integrity of the search and study of extra terrestrial life, if it exists.
